Design for these patient units influences patients, their families, critical care nurses, clinical staff, and intensivist physicians alike. Unit design can influence patient outcomes. This chapter provides a brief overview of critical care, including nursing tasks, technological complexity, issues of safety, human factors, and architectural design guidelines, all leading to system design issues.

The traditional design of critical care units has been influenced by reliance on a single paper medical record, central monitors, and regulations promoting a single, centrally located workstation from which all beds within the unit can be observed. These conditions are changing as information systems allow the digital record to be in multiple places at once, interdisciplinary care teams become more prevalent, nursing moves closer to the bedside, families become more involved in patient care ...

The COVID-19 ICU Design Award honors a critical care unit that was built or heavily modified from late 2019 through May 2020 to expand ICU bed capacity. The ICU design should be configured to provide care for COVID-19 patients as well as to ensure staff safety. This new award, available in 2020 only, has been conceived to identify and recognize a critical care unit that might not have been in operation before the COVID-19 pandemic.
