The draft Managing Hazardous Drug Exposures: Information for Healthcare Settings, which is in the docket for this activity, is intended to assist employers in establishing their own hazardous drugs management procedures specific to their workplace.

The Chapter Answer Book will provide a balance of both formal requirements of the USP chapter as well as practical advice and consideration in complying with the chapter. The reader will be able to follow a nonsterile product from receipt to preparation in a healthcare facility, addressing core elements of the USP chapter. The standards outlined in this chapter include: Facility design specification Personnel training and core competencies Suggested approaches for documenting competency Work practices to meet requirements and best practices Guidelines, procedures, and compliance requirements for compounding nonsterile preparations Compounding quality nonsterile preparations Beyond use dating guidance and training And much more Author Patricia Kienle is a known authority on sterile compounding. She currently serves as a member of the USP Compounding Expert Committee and was Chair of the subcommittee and Expert Panel that developed USP as a guide for practical advice and explanation to help ensure compliance with the requirements of USP .

Provides you with the guidelines and techniques you need to safely handle hazardous materials in your workplace. Includes updated tables and figures.

Problem: Safety concerns have existed for more than 40 years about how hazardous drug (HD) exposure contributes to long- and short-term adverse health outcomes for healthcare workers (HCWs). Careless handling may cause toxic residues to infiltrate hospital environments and patient care areas, and can even be traced to patients' homes. New government regulations will require healthcare organizations to minimize exposure risks to HCWs by fully implementing the U.S. Pharmacopeia (USP) Convention Chapter 800: Hazardous Drugs: Handling in Healthcare Settings (USP, 2016) on December 1, 2019. According to Polovich and Olsen (2017), "The implementation of the USP 800 Standards will represent an important step forward for nurses and other potentially exposed HCWs". Context: The proposed Doctor of Nursing Practice (DNP) project will implement an HD safe-handling personal protective equipment (PPE) toolkit at an ambulatory cancer infusion center to improve nurses' adherence with the USP 800 Standards and hospital policies addressing PPE use when handling, administering, and disposing of HD. Proposed Interventions: Interventions for this project will consist of (a) an HD safe-handling PPE toolkit for infusion nurses, (b) a PPE observation tool, (c) an expert panel discussion, (d) a nurses' skills session, (e) safe-handling adherence between observation and self-assessment survey, (f) hazardous drug administration safe handling peer-to-peer checklist, and (g) a performance dashboard to display progress. Proposed Outcome Measures: Outcome measures include (a) 90% or higher compliance rates with PPE use and (b) sustained adherence to USP 800 Standards and hospital policies for safe HD handling to 100% by February 2020.

"The Chapter 800 Answer Book provides an explanation of elements of USP 800 Hazardous Drugs-Handling in Healthcare Settings and best practices to comply with the requirements and recommendations of the USP General Chapter"--

This eReport, Compounding Hazardous Drugs, reflects the newly revised Chapter guidelines on handling hazardous drugs, specifically relating to compounding and can be used for staff competency assessment and training. Compounding hazardous drugs (HDs) requires skill in preparation, as well as protection of the compounding personnel. Injectable oncology agents comprise the majority of HDs compounded, but agents for other routes of administration and other conditions are also prepared. Competence for compounding HDs includes written and verbal instruction and review of practices for both sterile and nonsterile compounding. In this eReport, Readers will learn how to do the following: □ Recognize hazardous drugs □ Discuss the precautions required when working with hazardous drugs □ Describe the key elements for cleaning and decontaminating areas used for compounding hazardous drugs □ Discuss the components of a medical surveillance program for those who compound hazardous drugs Topics covered include: □ Definition of a hazardous drug □ Special precautions related to compounding hazardous drugs □ Facility design □ Aseptic technique □ Personal protective equipment □ Specific work practices □ Medical surveillance program A self-assessment quiz is included to verify that learning objectives have been met.

"The Chapter 795 Answer Book provides an explanation of elements of United States Pharmacopeia (USP) 795 Pharmaceutical Compounding -Nonsterile Preparations and best practices to comply with the requirements and recommendations of the USP General Chapter"--

This book reflects the accrediting industry's increased emphasis on safety for the patient, employees, and the general public. To that end, it aims to help pharmacies comply with critical standards and incorporate them into their everyday practice. This edition includes the most current updates, revised examples of forms and documents, updated checklists, and an expanded more complete index for easier search capabilities. Additionally, the authors put this latest data into context with compliance strategies you can use in your everyday practice.

Empower your staff to improve safety, quality and compliance with the help of new guidelines and standards. We've updated every chapter of this popular review of the fundamentals of preparing sterile products in hospital, home-care, and community pharmacy settings to reflect the most recent revisions to USP . Included are the latest guidelines for the compounding process, quality assurance methods, and comprehensive coverage of all aspects of the dispensing process. Comprehensive documentation for the guidelines is included in the appendices.Chapters new to this edition focus on: Gap analysis and action plans Safe use of automatic compounding devices Cleaning and disinfecting Radiopharmaceuticals as CSPs Allergen extracts as CSPs.
