permanent dentition. MIH is considered a worldwide problem and usually occurs in children under 10 years old.

Molar incisor hypomineralisation - Wikipedia

Molar incisor hypoplasia (MIH) is a condition that affects the incisors and molar teeth. It has a varied prevalence of 2.8-25%.

However, a recent systematic review has reported a wide variation in defect prevalence (2.4-40.2%, mean around 18%) (Jälevik et al. 2010).
