The 1998 Revision includes changes and corrections authorized by the Joint Steering Committee for Revision of AACR since 1988, including amendments authorized through 1997.

Underdeveloping the Amazon shows how different extractive economies have periodically enriched various dominant classes but progressively impoverished the entire region by disrupting both the Amazon Basin's ecology and human communities. Contending that traditional models of development based almost exclusively on the European and American experience of industrial production cannot apply to a regional economy founded on extraction, Stephen G. Bunker proposes a new model based on the use and depletion of energy values in natural resources as the key to understanding the disruptive forces at work in the Basin.

Case-based reasoning means reasoning based on remembering previous experiences. A reasoner using old experiences (cases) might use those cases to suggest solutions to problems, to point out potential problems with a solution being computed, to interpret a new situation and make predictions about what might happen, or to create arguments justifying some conclusion. A case-based reasoner solves new problems by remembering old situations and adapting their solutions. It interprets new situations by remembering old similar situations and comparing and contrasting the new one to old ones to see where it fits best. Case-based reasoning combines reasoning with learning. It spans the whole reasoning cycle. A situation is experienced. Old situations are used to understand it. Old situations are used to solve a problem (if there is one to be solved). Then the new situation is inserted into memory alongside the cases it used for reasoning, to be used another time. The key to this reasoning method, then, is remembering. Remembering has two parts: integrating cases or experiences into memory when they happen and recalling them in appropriate situations later on. The case-based reasoning community calls this related set of issues the indexing problem. In broad terms, it means finding in memory the experience closest to a new situation. In narrower terms, it can be described as a two-part problem: assigning indexes or labels to experiences when they are put into memory that describe the situations to which they are applicable, so that they can be recalled later; and at recall time, elaborating the new situation in enough detail so that the indexes it would have if it were in the memory are identified. Case-Based Learning is an edited volume of original research comprising invited contributions by leading workers. This work has also been published as a special issues of MACHINE LEARNING, Volume 10, No. 3.

A well-devised marketing plan can improve a company's performance. Clarifying the complexities faced by those responsible for compiling a plan, this edition sets out clear guidelines on how to go about this task.

Features text and accompanying photographs of artifacts recovered from the bronze age in Europe, including figurines, jewelry, weapons, and armor

Educators need to be able to understand the research in their field. This book provides readers with the necessary background information needed for understanding the uses of qualitative research in education. This new edition places qualitative research within current debates about research methods and alternative ways of knowing. Educators, sociologists of education.

The Faith Explained is an all-in-one handbook to help you understand, explain, and defend the great truths of the Catholic Faith. In brief and readable chapters, it explains the purpose of human existence, God and His perfections, the creation and fall of man, the Incarnation, the redemption, the sacraments, sacramentals, prayer, the importance of the Bible, and much more. Perfect for RCIA classes, this book is also a magnificent refresher course on the Faith for Catholics and an illuminating resource for non-Catholics with questions about the Church.

This book displays the striking creativity and profound insight that characterized Freire's work to the very end of his life—an uplifting and provocative exploration not only for educators, but also for all that learn and live.
