This guide is intended to offer both small and large, career and volunteer departments, specific recommendations and example for applying ergonomics. The guide's contents includes an introduction to ergonomics, ergonomic-related disorders, developing an ergonomics program, ergonomic hazards, preventing and controlling ergonomic hazards, training, medical management, procedures for reporting injuries, implementing the ergonomic program, and evaluating program effectiveness.

This is the twenty-first in the most prestigious series of annual volumes in the field of industrial and organizational psychology. The series provides authoritative and integrative reviews of the key literature of industrial psychology and organizational behaviour. The chapters are written by established experts and topics are carefully chosen to reflect the major concerns in both the research literature and in current practice. Reflecting the ethos of the series as a whole, this twenty-first volume provides scholarly, state-of-the-art overviews of developments across a diverse range of areas, including: attribution theory, performance appraisal, women at work, international management, task analysis, and qualitative research methods. Each chapter offers a comprehensive and critical survey of the chosen topic, and each is supported by a valuable bibliography. For advanced students, academics and researchers, as well as professional psychologists and managers, this remains the most authoritative and current guide to new developments and established knowledge in the field of industrial and organizational psychology.

Topics Include: industrial ergonomics, risk, accidents and accident prevention, safety and surveillance, posture perception, cognitive ergonomics, telerobotics, military occupational ergonomics, and international ergonomics.

With contributions from an international group of authors with diverse backgrounds, this set comprises all fourteen volumes of the proceedings of the 4th AHFE Conference 21-25 July 2012. The set presents the latest research on current issues in Human Factors and Ergonomics. It draws from an international panel that examines cross-cultural differences, design issues, usability, road and rail transportation, aviation, modeling and simulation, and healthcare.

This first section of this book deals with cognitive ergonomics, covering such topics as the design of graphical user interfaces and speech recognition facilities. The second part of the book is dedicated to the increasingly popular field of computer-assisted learning.

Usability Assessment is a concise volume for anyone requiring knowledge and practice in assessing the usability of any type of product, tool, or system before it is launched. It provides a brief history and rationale for conducting usability assessments and examples of how usability assessment methods have been applied, takes readers step by step through the process, highlights challenges and special cases, and offers real-life examples. By the end of the book, readers will have the knowledge and skills they need to conduct their own usability assessments without requiring that they read textbooks or attend workshops. This book will be valuable for undergraduate and graduate students; practitioners; usability professionals; human-computer interaction professionals; researchers in fields such as industrial design, industrial/organizational psychology, and computer science; and those working in a wide range of content domains, such as health care, transportation, product design, aerospace, and manufacturing.

The broad and developing scope of ergonomics, the application of scientific knowledge to improve people's interaction with products, systems and environments, has been illustrated over the past fifteen years by the books which make up the Contemporary Ergonomics series. Presenting the proceedings of the Ergonomics Society's Annual Conference, the series embraces the wide range of topics covered by ergonomics. Chapters provide an insight into the current practice, present new research findings and form an invaluable reference source. Contemporary Ergonomics will appeal to all those who have an interest in people's interactions with their working and leisure environment, including designers, manufacturing and production engineers, health and safety specialists, occupational, applied and industrial psychologists, and applied physiologists.

Get Free Sergeant Ergometrics Test Study

This book examines the human factors issues associated with the development, testing, and implementation of helmet-mounted display technology in the 21st Century Land Warrior System. Because the framework of analysis is soldier performance with the system in the full range of environments and missions, the book discusses both the military context and the characteristics of the infantry soldiers who will use the system. The major issues covered include the positive and negative effects of such a display on the local and global situation awareness of the individual soldier, an analysis of the visual and psychomotor factors associated with each design feature, design considerations for auditory displays, and physical sources of stress and the implications of the display for affecting the soldier's workload. The book proposes an innovative approach to research and testing based on a three-stage strategy that begins in the laboratory, moves to controlled field studies, and culminates in operational testing.
