encrypted high-speed
voice calls from hand-
held phones; and,
depending on the
system, low and high-

is a step above any other

This book will leave

will benefit

this book identifies the
role of satellite

must keep up with, the
political environment;
and the significant
changes in the post-Cold

The third part of the book covers development, implementation and management of advanced satellite encryption options and strategies that will forever change how organizations do business now and in the foreseeable future. The fourth part of the book discusses the misuse of

A basic problem in computer vision is to understand the structure of a real world scene given several images of it. Techniques for solving this problem are taken from projective geometry and photogrammetry. Here, the authors cover the geometric principles and

their algebraic

representation in terms
of camera projection

matrices, the

fundamental matrix and

the trifocal tensor. The

theory and methods of

computation of these

entities are discussed

with real examples, as is

their use in the

reconstruction of scenes

from multiple images.

The new edition features
