The Tektronix 434 is an analog CRT storage scope with two independent storage areas on the screen. It has a bandwidth of 24 MHz and uses a tunnel diode in its trigger circuit. The storage is done in the CRT itself, by trapping charge on a special fine grid of isolated pads behind the phosphor where the electron beam is then blocked or released.

I have a Tektronix 434 'scope, that was working well enough until recently. At power on, seemingly nothing happens, unless you listen closely; then you can hear it cycling about every second or so, seemingly trying to start up. No lights on the front panel. The neon bulb on the primary power board lights up.
