Surface waveguides radiate energy at bends. The asymptotic problem of solving for the radiated power and the radiation pattern for large radius of bend have been studied theoretically for the slab waveguide and for

Read PDF The Circular

the circular
cylindrical waveguide.

The slab

configuration consists
of two semi-infinite
slabs joined by a

circular bend. The
cylindrical

configuration consists
of two straight

circular cylinders
joined by a circular

bend. The results
indicate that the

Read PDF The Circular

discontinuities at the transitions between the straight sections and the bend cause the radiation to differ significantly from the radiation of a bend of the same size but being part of a uniform circular structure rather than being joined to two straight sections. The radiated power for

Read PDF The Circular

both the slab and circular cylinder configurations is found to vary inversely as the square of the radius of curvature, and the radiation pattern is composed of many closely spaced narrow lobes. As the radius of curvature of the bend increases the lobes become more

Read PDF The Circular

Structure Of numerous and more closely spaced. The results can be extended for use to calculate approximate power loss due to radiation from bends in open waveguides in close proximity to the earth. (Author).
