~~Manufacturing Cross-Docking: This procedure involves the receiving of purchased and inbound products that are required by manufacturing. The warehouse may receive the products and prepare sub-assemblies for the production orders. Distributor Cross-Docking: This process consolidates inbound products from different vendors into a mixed product pallet, which is delivered to the customer when the final item is received.~~

~~Warehouse Logistics: Cross-Docking~~

~~The goals of any shipping relationship are simple: to get a product from your business to a customer with minimum damage, cost, and time. But, many small businesses do not understand the difference between cross-docking services and warehousing and shipping. While traditional warehousing systems require that a distributor has stocks of product on hand to ship to your customers, a cross-docking system focuses on using the best technology and business systems to create a JIT (just-in-time) ...~~

~~Warehouse Receiving And Cross Docking | www.uppercasing~~
Cross docking is most commonly used as part of a company's warehouse and distribution efforts. Many companies have products brought into a warehouse where they are sorted, consolidated, and then put onto another truck or transport vehicle to go out to a retail outlet. These locations serve as warehouses or distribution centers.

~~Cross-Docking (Understanding Efficient Warehouses)~~
Cross docking is a logistics procedure where products from a supplier or manufacturing plant are distributed directly to a customer or retail chain with marginal to no handling or storage time. Cross docking takes place in a distribution docking terminal; usually consisting of trucks and dock doors on two (inbound and outbound) sides with minimal storage space.
